NEW PRODUCT ANNOUNCEMENT

EVOLUTION[®] 5800

EVOLUTION[®] 5800 THERMAL IMAGING CAMERA

The newest addition to MSA's 5000 Series of Thermal Imaging Cameras

Features

- User Selectable Palettes
- Image Detail Enhancement
- Instant On
- High Sense Imagery
- 320 x 240 Focal Plane Array
- 2X Digital Zoom
- Heat Seeker Plus

Benefits

- Maximizes scene information, providing greater image detail
- Enhances camera imagery in low contrast temperature environments
- Camera starts in 2 seconds or less
- Best high sense imagery 2 to 4 times longer than competitive cameras
- Increased number of pixels for improved picture quality
- Magnifies image, providing more detail
- Only MSA offers color pixelization in high- and low-sense modes

MSA's Evolution 5800 TIC, the newest addition to MSA's 5000 Series of Thermal Imaging Cameras, offers state-of-the-art imagery with a high-resolution-format, microbolometer-based infrared sensor.

MSA's new Image Detail Enhancement (IDE) software enhances the camera's imagery so that it matches the total dynamic range of the original image, and makes image detail visible to you, even in scenes with extreme-temperature dynamics. This enhanced imagery is combined with five user-selectable palettes, to give firefighters a customized image that maximizes the scene information you need for your plan of attack, even in low temperature-contrast environments.

The Evolution 5800 TIC incorporates all of the established user-friendly form factors in MSA's 5000 Series TICs. These features include single-button activation, patented dual-handle design for ease of handoff, a lightweight lithium ion battery with over two hours of run time, a protective battery compartment, and a comprehensive offering of interchangeable accessories.
