PROTECTING AMERICA'S HEROES

5 Alarm Fire and Safety Equipment Presents ICE RESCUE TRAINING

All first responders should know how to carry out a surface ice rescue. Is your team prepared to safely manage a thin ice emergency? 5 Alarm's Ice Rescue course teaches:

- How to deal with the physical and emotional environment of an ice rescue
- How to identify ice conditions / ice formation
- How to identify and treat hypothermic patients
- Different techniques to safely perform an ice rescue such as reach, throw, row and go technique as well as use of water craft, specialty craft and specialty equipment unique to ice rescue.

During the classroom portion of our program you will be provided with the opportunity to analyze multiple real-life ice rescues, and failures, from our video archives. Then in the afternoon session you will be given the opportunity to put the skills learned in the classroom to use during the hands on thin ice rescue practical workshop. Additional program topics include:

- Cold-water near-drowning
- Equipment selection
- Operational planning and scene evaluation
- Self rescue techniques

5 Alarm's Courses follow NFPA Standards wherever applicable.

All Equipment and Ice Rescue Suits will be provided. Participants are required to have full turn-out gear.
